

## 利用生物信息手段探究黄鼠缺血耐受机制

# Exploring the mechanisms of ischemic resistance in ground squirrels by bioinformatics tools

Group2

孙绍强、田武、李洪涛、高晋

School of Life Sciences

Peking University

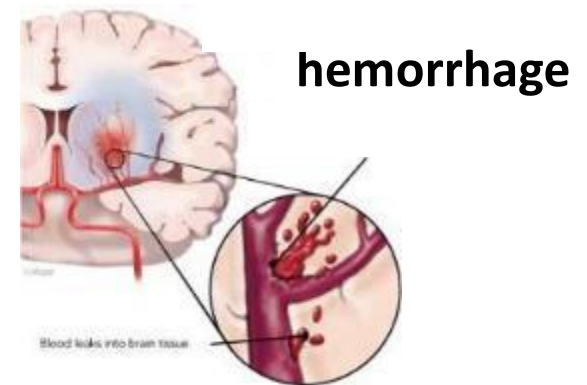

# Stroke (World Stroke Day June 24<sup>th</sup>)

★ Brain vascular disease has become a top cause leading to citizen death in China

★ classified into: ischemic stroke and hemorrhagic stroke

缺血型中风、出血型中风

★ no effective treatment

Ischemic(>80%)

# Glutamate acids accumulation and calcium overload during ischemia

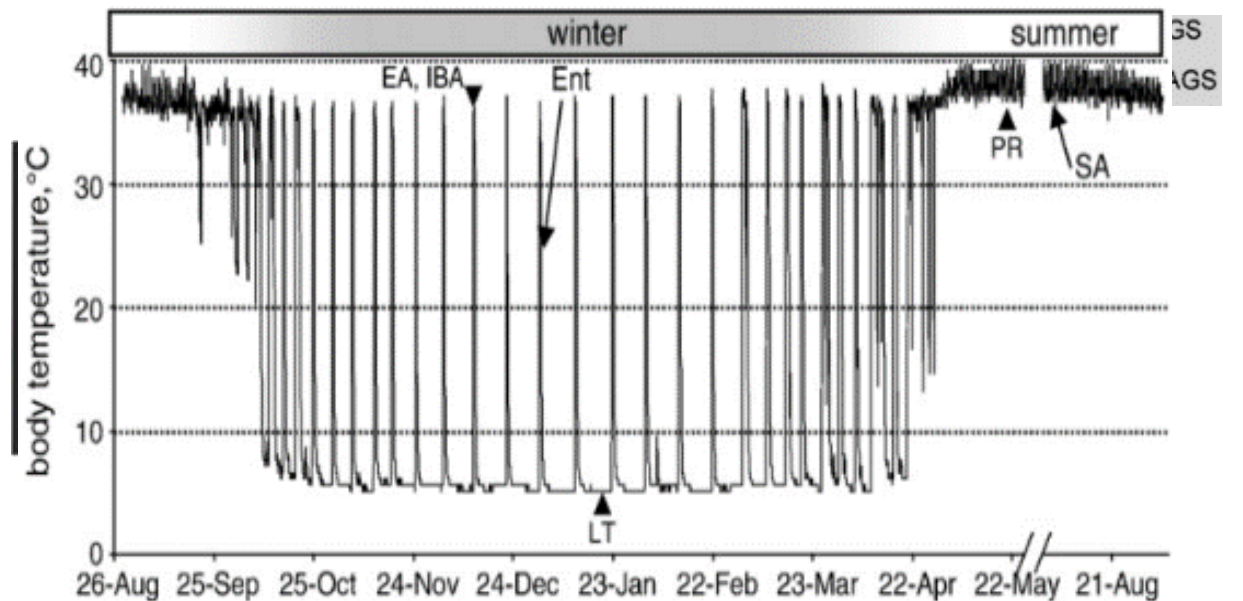

# Hibernators (冬眠动物)

**Hibernation** is a state of inactivity and metabolic depression in endotherms during winter

Hypothermia resistance

Ischemic resistance

耐低温、耐缺血

Rose et al., *Comp Biochem Physiol Part D Genomics Proteomics*, 2011

★ Other(anti muscle disuse atrophy、 anti-cancer et al)

Ma et al., *J Neurosci Methods*, 2008

AGS: Arctic ground squirrel

# Exploring neuronal ischemic resistance mechanisms in GS

*Spermophilus dauricus*

- Whole animal level
- Tissue level
- Cellular level

# The velocity of calcium removal was faster in ground squirrel neurons than in rat neurons

200  $\mu$ M 谷氨酸处理3h后检测； n=42-62个神经元， 4-5次独立实验。

# Cellular Calcium homeostasis

# Calcium removal mediated by SERCA showed no difference in GS neurons than in rat neurons

TG: thapsigargin, SERCA (内质网钙泵) 特异性抑制剂;  $R=1/\tau$ ;  $n=56-70$ 个神经元, 3次独立实验。

# Calcium removal mediated by NCX was faster in ground squirrel neurons than in rat neurons

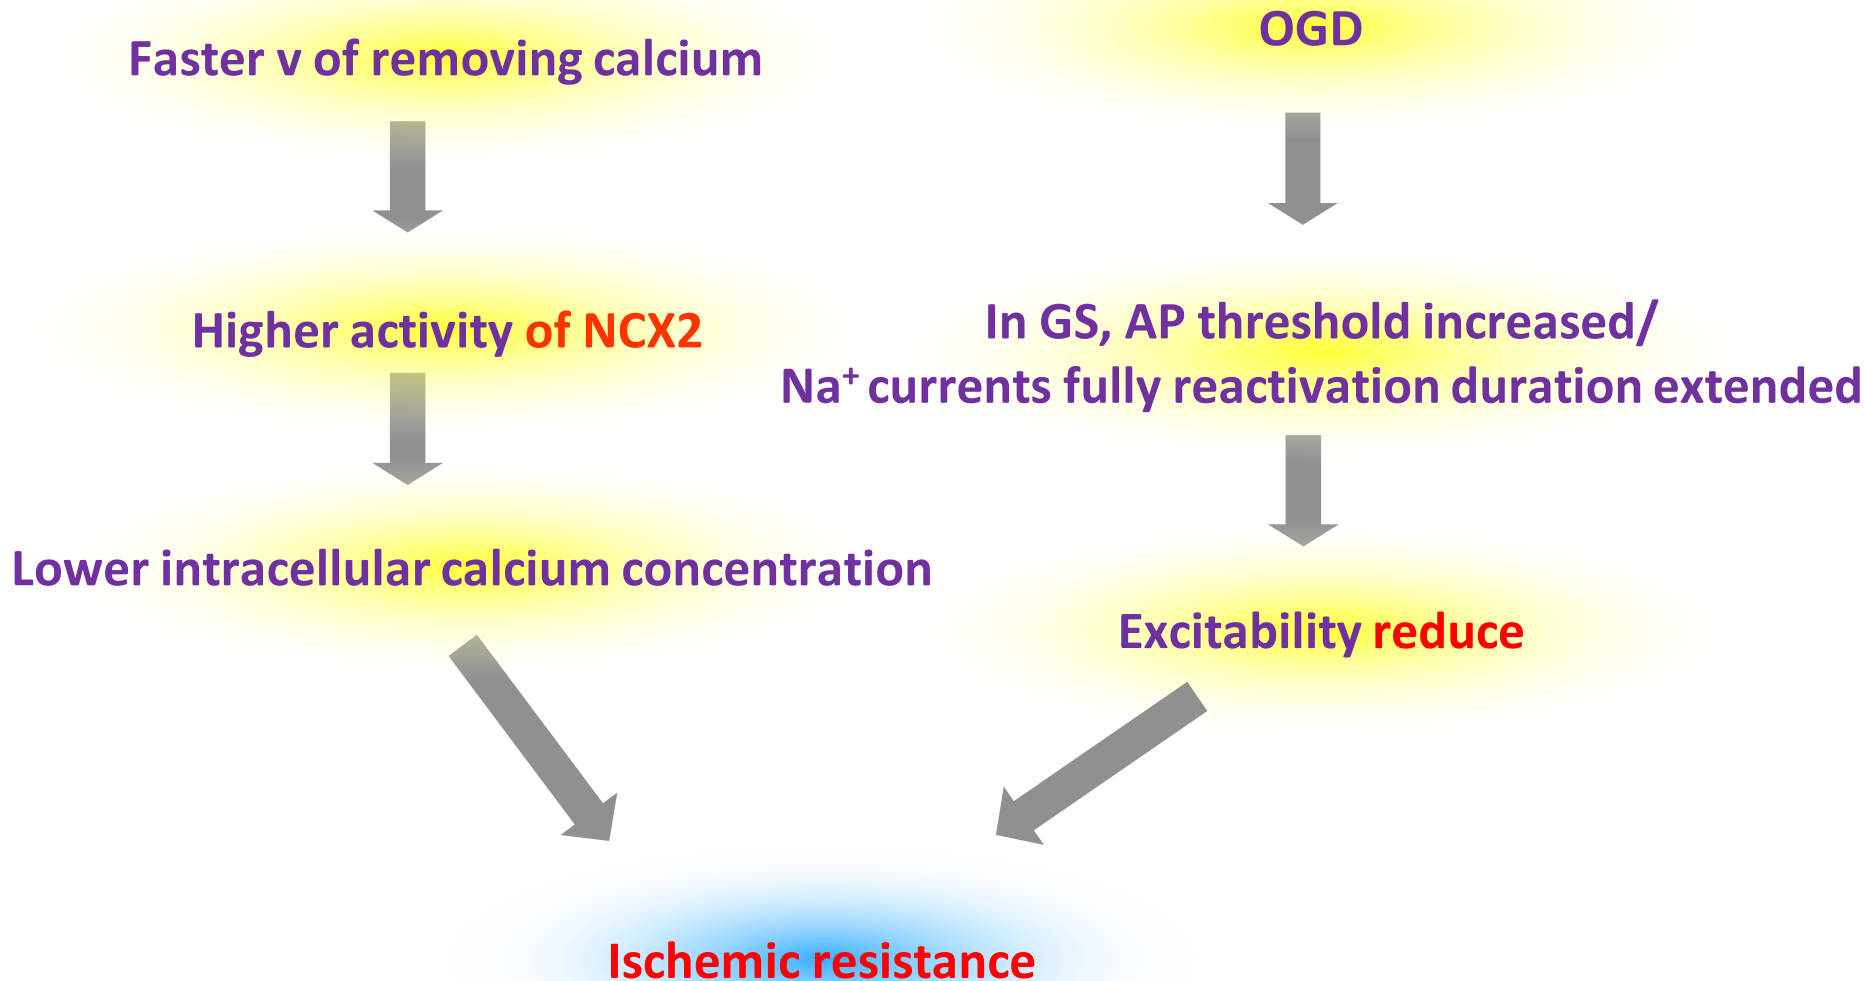

CB-DMB: NCXs (钠钙交换体) 的特异性抑制剂; n=73-96个神经元, 3次独立实验。

# Expression of ground squirrel NCX2 in rat neurons increased neuron survival against glutamate toxicity

过表达黄鼠NCX2亚型的大鼠神经元对谷氨酸毒性有更高的耐受性

# DISPHOS 1.3

## Disorder-Enhanced Phosphorylation Sites Predictor

Paste your FASTA formatted protein sequence

Or select a file:  未选择任何文件

Default Predictor

### Group Predictors

Group predictors are trained to minimize the number of total misclassified residues for a particular group (see [Usage](#) for detailed instructions).

### Kingdoms and Viruses

Eukaryotes

#### Organism

- H. sapiens*
- M. musculus*
- R. norvegicus*
- C. elegans*
- S. cerevisiae*
- D. melanogaster*
- A. thaliana*

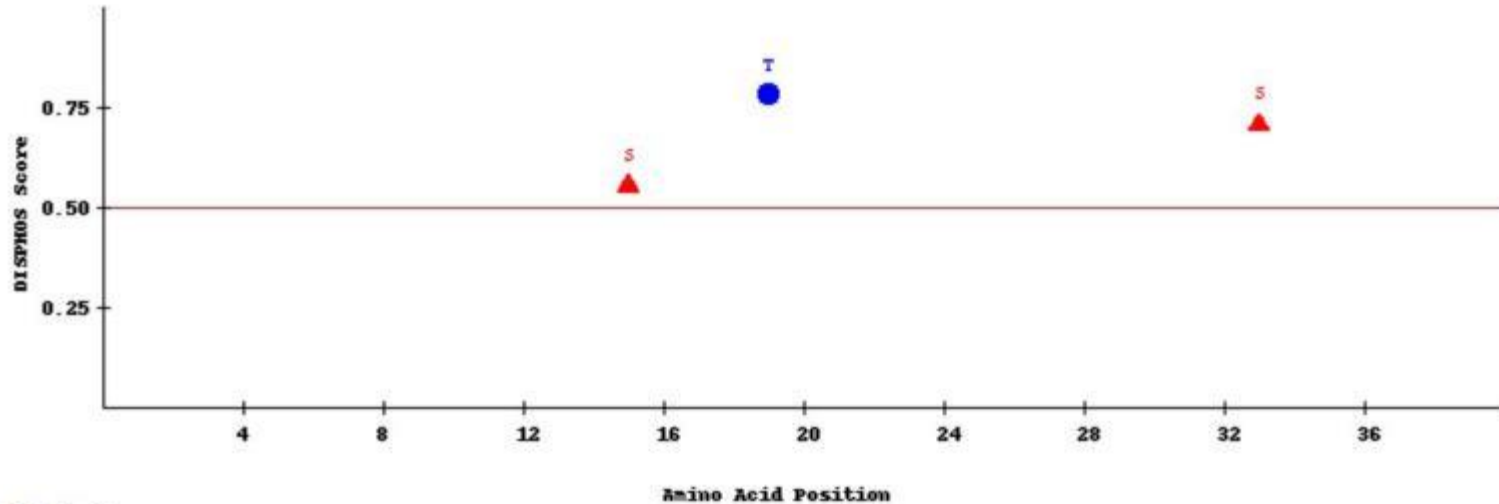

#### Functional Category

- regulation
- cytoskeleton
- ribosomal
- transport
- degradation
- metabolism
- cancer
- membrane
- inhibitors
- kinases
- biosynthesis
- GPCRs

- Archaea
- Bacteria
- Viruses

# DISPHOS

<Unknown> results

## Statistics

Number of phosphorylated serines: 2 out of 2 (100.000%)

Number of phosphorylated threonines: 1 out of 2 (50.000%)

Number of phosphorylated tyrosines: 0 out of 0 (0.000%)

Position	Residue	Score	Sequence	Yes/No
2	T	0.019	***MTGAGN	
16	S	0.558	AADASRRAT	YES
20	T	0.784	SRRATPADG	YES
34	S	0.713	DDGASRIFF	YES

\*An asterisk indicates prediction by similarity to the training sequences

# NETPHOS

## NetPhos 3.1 Server

The **NetPhos 3.1** server predicts serine, threonine or tyrosine phosphorylation sites in eukaryotic proteins using ensembles of neural networks. Both generic and kinase specific predictions are performed. The **generic** predictions are identical to the predictions performed by [NetPhos 2.0](#). The **kinase specific** predictions are identical to the predictions by [NetPhosK 1.0](#). Predictions are made for the following 17 kinases:

ATM, CKI, CKII, CaM-II, DNAPK, EGFR, GSK3, INSR, PKA, PKB, PKC, PKG, RSK, SRC, cdc2, cdk5 and p38MAPK.

See the [version history](#) of this server.

**NOTE:** the online service at <http://www.cbs.dtu.dk/services/NetPhosK> is currently off-line;  
for the kinase specific predictions this service should be used instead.

# Swiss-model

# Summary

- ✦ We used DISPHOS and Netphos to predicted phosphorylation sites in NCX2.
- ✦ The expression of GS NCX2 or mutated Rat NCX2(G380T) can increase its resistance to glutamate acid injury.
- ✦ We compared the sequence of all the Nav proteins and predict the T1971I in Nav 1.2 may be a possible phosphorylation site.
- ✦ We Homology modeled all these protein and found the different structure are mainly localized in the S2-S5 region.
