

TALENs技术实现定向基因打靶在斑马鱼中的应用

Targeted Gene Disruption in Zebrafish Using Engineered TALENs

指导老师：张博

报告人：伍应丹

组员：李颖星 郭红 伍应丹 张靖若

研究背景

- 斑马鱼作为模式生物，具有以下几个优点：
 - 体积小，生长周期短，易于大规模饲养。
 - 产卵量大，并且其产卵过程可以人为控制。
 - 体外受精，胚胎透明，其发育过程可以进行连续观察。
 - 多种器官、系统的发育与人类相似。
- 遗传学的研究有两种方法：
 - 正向遗传学：人工诱变，大规模筛选，获得突变体，费时费力。
 - 反向遗传学：定向突变目的基因，快速获得突变体。
- 在以斑马鱼为模式生物的研究中，应用TALEN技术进行定向基因打靶，具有重要的意义。

研究背景

- **TALEN**（Transcription activator-like effector nucleases, TALEN, 转录激活子样效应因子核酸酶）：一种**人工核酸酶**，是用于**定向基因打靶**的一种**新技术**，由**转录激活子样效应因子（TALE）**和**核酸酶**构成。
- **核酸酶**（nucleases）：主要是**Fok I**，一种**II S型的核酸内切酶**，具有特异的识别位点结构域（**突变**）和**切割位点结构域**，**二聚化**后才具有**切割活性**。

目的基因的选择

The image shows the Ensembl genome browser interface. At the top, the Ensembl logo is on the left, and navigation links for BLAST/BLAT, BioMart, Tools, Downloads, Help & Documentation, Blog, and Mirrors are in the center. A search bar on the right says "Search all species...".

On the left side, there is a sidebar menu with the following items: Resequencing, Linkage Data, Markers, Other genome browsers (UCSC, NCBI, Vega), Configure this page, Manage your data, Export data (highlighted with a red circle), and Bookmark this page.

The main content area is divided into two panels. The top panel shows a genomic track for Chromosome 13 (1,712,312 - 2,212,311) with a 500.00 Kb scale. It displays various genes and transcripts, including COL21A1, GFRAL, hcrtr2, fam83b, MLIP (highlighted with a red box), lrrc1, CABZ01066734.1, and dov5. A legend below indicates that red bars represent protein coding genes and yellow bars represent merged Ensembl/Havana genes.

Below the top panel is a search bar with "Location: 13:1930015-1994608" and "Gene:" fields, both with "Go" buttons. Navigation arrows are on the right.

The bottom panel shows a detailed view of the selected region (64.59 Kb). It includes tracks for 5-way GERP elements, Vertebrate cDNAs, EST clusters, Contigs, Genes (Merged Ensembl/Havana), EST clusters, Vertebrate cDNAs, Zebrafish cDNAs, and %GC. The gene CU571255.6 is highlighted in green, and its protein-coding region is shown in red. The reverse strand is indicated at the bottom.

TAL Effector Nucleotide Targeter 2.0

[Tools](#)[About TALE-NT](#)[Resources](#)[Software](#)[FAQs](#)[Tutorials](#)[Contact Us](#)

Tools

Software, protocols, tools, and information for designing, evaluating, and assembling custom TAL effector constructs

Welcome to the new TAL Effector Nucleotide Targeter website! In addition to a new look, we have added more options to our tools to allow you to design custom TAL effectors that work with a variety of TAL effector/TAL effector nuclease architectures.

Choose the TAL Effector-Nucleotide Targeter tool you would like to use. For information and tips on using the tools, check out the Help page:

TALEN Targeter

Design arrays for TAL Effector Nucleases to target your DNA sequence.

NOTICE: Off-target counting is now limited to sequences of 1000 bases or less. See the News section below for more details

TALEN Targeter (old version with design guidelines)

Design arrays for TAL Effector Nucleases to target your DNA sequence.

TAL Effector Targeter

Design a single TAL effector to target your DNA sequence. A newer, updated version of Single TALE Targeter.

Target Finder

Identify the best-scoring sites in a DNA sequence for a specified RVD sequence. This new tool combines the functions of the older TAL Effector Site Finder and Off-target Site Finder into one tool. **Update:** Now incorporates NH-G specificity.

Paired Target Finder

Identify the best-scoring sites in a DNA sequence for a pair of RVD sequences. Use to find potential off-targets for a TALEN. **Update:** Now incorporates NH-G specificity.

TALENT 2.0 has been published in the 2012 Nucleic Acids Research Webserver issue!

Doyle E.L., Booher, N.J., Standage, D.S., Voytas, D.F., Brendel, V.P., VanDyk, J.K., and Bogdanove, A.J. (2012) TAL Effector-Nucleotide Targeter (TALE-NT) 2.0: tools for

Submit Old TALEN Targeter

Test the tool using sample data

Sequence

Enter up to 5000 total bases. E.g., you may have 1 sequence of 5k bases, 5 sequences with 1k bases, or any such combinations. Sequences should be in FASTA format and include a header line that starts with a '>'. For larger data sets, attach a file instead of pasting text in.

Sequence File

Files must be less than 2 MB.

Allowed file types: fasta.

Use a Preset Architecture Provide Custom Spacer/RVD Lengths

Preset Architecture

- None -
 Cermak et al., 2011 (spacer 15-24, RVDs = 15-20)
 Miller et al., 2011 (spacer 15-20, RVDs = 15-20)
 Mussolino et al., 2011 (spacer 12-15, RVDs = 15-20)
 Li et al., 2011 (spacer 16-31, RVDs = 15-20)

Select the base that should precede target sites on the 5' end.

Options

- Require C, G, or T at position 2 (not an A)
- Percent composition
- Do not allow sites to end in G
- Require A, C, or G at position 1 (not a T)
- Require a T at position N

```

Standard sequences:
Plasmid vectors ▾
Viral + phage ▾

The sequence is: Linear Circular

Enzymes to use: NEB enzymes
 All commercially available specificities
 All specificities
 All + defined oligonucleotide sequences
 Only defined oligonucleotide sequences
[\[define oligos\]](#)

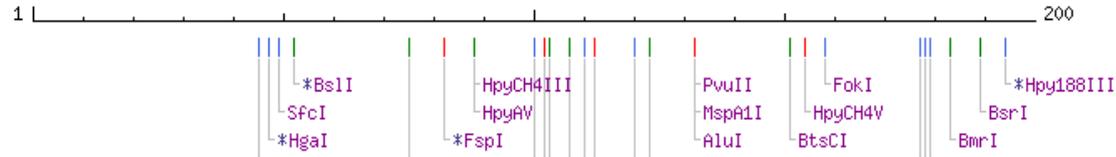

Minimum ORF length to display: a.a.

Name of sequence: *(optional)*

Earlier projects:
[no name](#)

*Note: Your earlier projects will be deleted 2 days after they were last accessed.

感谢：

- 罗静初老师教会我很多很实用的生物信息学的知识。
- 张博老师对我的细心指导。
- 肖安师兄、徐琳杰师姐、韩宇翔师兄、胡莹莹师姐和罗舟师兄在文献阅读、生物信息学的应用以及实验操作中给我的指导和帮助。
- 感谢实验室其他的老师以及师兄师姐给予我的帮助。
- 组员们给我的支持和帮助。

Thank you for your patience !
